vision of the internet where everything e.g. information, software, platforms and infrastructures is available as a service. Services available on the internet of services can be used by anyone if they are used according to the policies defined by the provider and they can be extended with new services by anyone. Advantages of the internet of services include the possibility to build upon other people's efforts and the little investment needed upfront to develop an application. The risk involved in pursuing new business ideas is diminished and might lead to more innovative ideas being tried out in practice. It will lead to the appearance of new companies that are able to operate in niche areas providing services to other companies that will be able to focus on their core business.

The workshop on emerging services technology (Wewst06) took place in conjunction with the 4th European Conference on Services (ECOWS 06) on 4th December 2006 in Zurich, Switzerland, acting as the natural extension to the main ECOWS conference. The main goal of the Wewst workshop is serving as a forum for providing early exposure and much needed feedback to grow and establish original and emerging ideas within the services community. The wide variety of tools, novel techniques and emerging technological solutions presented in Wewst share one common feature: they advance the current services research in new directions by introducing new and sometimes controversial ideas into the field. Wewst focuses on research contributions advancing the state of the art in services technologies in the following areas: model-driven engineering for SOA, mobility and services, streaming services and event-driven architectures, dynamic service discovery and composition, lightweight orchestration, SLA creation and service delivery, semantic managing change and service evolution, business-driven development, service-oriented grid computing, middleware, business process management for services, software and service engineering. Wewst covers the whole spectrum which makes it a very important part of ECOWS.

Based on the previous edition and the momentum in this emerging and exciting field, ESS 2011 offered academics, researchers and practitioners from various disciplines an exploratory platform to communicate and share their results and experiences. The 17 full and 2 short papers accepted for ESS were selected from 47 submissions and cover the whole life cycle of service development, including service innovation, service design, service composition and service sustainability, as well as the application of services in information technology, businesses and public administration.
