chalk is the most important source of fresh water in north west europe more than eight million cubic metres of water are pumped daily from the aquifer this work presents an authoritative survey of the origin sedimentology and hydraulic properties of this unique rock and the chemical characteristics of the water it contains the factors influencing the flow through the chalk and its role as a hydrocarbon reservoir in the north sea are reviewed along with the threats that industrial chemicals fertilizers and pesticides present to the supply the long term implications of pollutants in this vital resource and the continuing ignorance of the factors that control the flow of water through the rock are highlighted

a mathematical primer on groundwater flow is a primer not a treatise designed to supplement not replace the standard textbooks used in most university level hydrogeology courses primarily directed to undergraduate juniors and seniors with a modest background in physics engineering and applied mathematics the text should also appeal to professionals designing to brush up on the mathematical side of groundwater flow on their own

concentrates on the often neglected but useful aspects of hydrogeological mapping covers geophysical survey methods and the importance of water chemistry as a tool in tracing the route of subsurface water and goes on to lay a basic foundation in subjects needed for practice in the field stratigraphy structural geology mineralogy petrography and geochemistry also covers basic disciplines and techniques indispensable for geological mapping e g cartography and surveying geophysics drilling soil science hydrology and botanics written from a uniquely practical standpoint

traditional means of data gathering are inadequate for present purposes in hydrology and water management thus hydrologists are urgently seeking new ways for supplementing their conventional data supplies satellite remote sensing is being explored increasingly as one possible answer to such data acquisition problems both because of its perceived facility for providing greatly improved space and time coverage of key hydrological observation systems and because the technologies of data acquisition transmission and processing have become more advanced and more capable although the use of remote sensing especially from satellites is currently less well developed in these contexts than in support of many other earth resource and environmental sciences much successful hydrological research has already been based upon satellite data and in limited but important ways satellite data have already begun to be used in water monitoring and management operations

exploring common ground between the disciplines of geomorphology and hydrogeology this work reports on the application of both fields to arid zone water supply groundwater pollution wetland conservation fisheries management and landscape protection

intended to complement the 1:250,000 scale hydrogeology map of northern Ireland this work provides an understanding of the hydrogeology of northern Ireland and through this the enhanced production and development of groundwater resources incorporated within it are the results of most of the hydrogeological work undertaken both by the BGS and the GSNI in the area including the BGS hydrogeological work undertaken both by the BGS hydrogeological survey carried out for the Environmental Service of the Department of the Environment for Northern Ireland between 1992 and 1994
